NOTICE

Date: November 03, 2025

To: <u>All 4rth Year Computer Science Students</u>

It is well known that you have enrolled for the course ***"Industrial Practice (CoSc3122)"*** in the first semester of the 2025/26 academic year. The presentation for the "Industrial Practice" course will take place on **November 07, 2023 starting from 8:30 AM**. Please ensure to use the attached Presentation Guideline when preparing your PowerPoint presentation.

With Regards,

Industrial Practice Coordinator

Practical Attachment Presentation Template

1. Introduction

1.1. Organization Background

Answer the following:

- Why do you select this company? (If you selected by yourself)
- In which section of the company, you have been working and why?
- What does the work flow in this section look like?
- Which work piece or work tasks you have been executing?
- What technical knowledge and skills from your course work were beneficial for your assignment?
- What types of programming language, methods, tools and techniques you have used from course work while performing your work tasks?
- What major challenges and problems you have faced with while performing your work tasks?
- What measures you have taken (propose as a solution for the selected problems) in order to overcome these challenges and problems, etc.

1.2.Introduction of the Project

Introduce your project in one slide

2. Problem statement & Justification

3. Objective of the project

4. Literature Review (related to your specific work/problem)

For Development

5. Functional Requirements

6. System Model:

i. Use Case: According to UML, use case model is composed of use case and actors. An actor is drawn in UML notation using either a "stick man" or a stereotyped box and is labelled with an appropriate name. Actors represent external entities that interact with

2

the system. An actor can be human or an external system. An actor represents a type of users of the system or external systems that the system interacts with.

Use case diagrams graphically depict system behaviour (use cases). These diagrams present a high-level view of how the system is used as viewed from an outside's (actor's) perspective.

ii. Class Diagram

- A class is a description of a group of similar objects that share the properties defined by the class.

7. **Methodology**

Briefly describe the methodology:

- Data collection
- Technologies
- Programming languages, tools and techniques used for the development of the system
- Software Development Methodology you followed

For Networking:

6. **Network Design Methodology:**

- The physical or logical layout of a computer network utilized: how interconnected devices and how data flows within the network.
- Network topology you used
- Deployment devices utilized

7. **Implementation**

- During the implementation phase of network design, several key components need to be considered and implemented.
- How IP addresses are allocated and assigned to devices within the network
- The selection and configuration of appropriate routing protocols you followed

Haramaya university

- The network security used for monitoring and controlling incoming and outgoing network traffic.
- Testing procedures and tools are used during the implementation phase to verify the proper functioning and performance of the network.

8. Benefit of the Internship

Answer the following questions in your ppt:

- What you gained in terms of improving your practical skills?
- What you gained in terms of upgrading your theoretical knowledge?
- What you gained in terms of improving industrial problem-solving capability?
- What you gained in terms of improving your team playing skills?
- What you gained in terms of improving your leadership skills?
- What you gained in terms of understanding about work ethics issues, industrial psychology and related issues?
- What you gained in terms of entrepreneurship skills?
- What you gained in terms of improving your interpersonal communication skills?
- How did this internship fit your career goals?
- Did your career goals change as a result of this internship experience?
- Discuss your feelings about the value of this internship.
- What challenges have you faced during the internship?
- Discuss your strengths and areas for improvement as self-evaluation.

9. Conclusion and Recommendations

This section of your ppt includes the following points:

- Overall conclusion.
- Your recommendation regarding the hosting company. Should we consider the company for future student placement?
- Your recommendation for improving the internship.

10. Implementation (Prototype) Demonstration: Only on your machine
